

Letter Of Introduction

My name is Elias Garcia, and I am a 17-year-old student graduating from the Soquel High Class of 2026. My plans after high school are to attend a 4-year university to study environmental engineering, civil engineering, or architecture. These are fields where I will practice building and critical thinking skills, which I work best with.

The classes that I have enjoyed most throughout my high school career include biotechnology, introduction to engineering, and math 2. My future goals are to become an engineer in the environmental or civil field, and these classes give me an insight into these professions. Through biotechnology, I learned some fundamental skills needed in the workplace, such as team management and communication. I also learned through hands on activities and labs, which taught me how to conduct many experiments safely. My introduction to engineering and math classes taught me aspects of engineering and career pathways that form from applying yourself in different fields. The intro to engineering class showed me the variety of engineering professions out there, which broadened my perspective on this career.

My biotechnology class taught me many skills which I use now, and skills that I will utilize in the future. In addition, this class has taught me many things in the biotechnology field, which I may apply to jobs in the future. Skills that I have learned include public speaking, solving problems, and working with people. These are important skills which will help me advance myself personally and professionally.

On the following pages you will see my resume, examples of my work, a list of references, and more. I hope you enjoy reading my portfolio and have a good rest of your day.

Sincerely,

Elias Garcia
